[Journals@Ovid](#)

v.96- (1995- )

v.90-v.99 (1990-1999) located in Compact Shelving

Print subscription and location.

Issues available online and link source of online issues.

Further Tips for CINAHL and Medline

- Use the **Refine Search and Search History**/Alerts tabs (only available in the Advanced Search mode) to limit your search, by population, to certain age groups and/or by language (limit to only articles in English.) or to view/combine previous searches.

- Add relevant citations to the folder, select "Folder has items", follow directions in order to print or e-mail the references and abstracts of the articles.

- Use the abstracts. Abstracts save you time, outlining the results of the research in order to help determine if the article is worth reading/relevant to your topic. Abstracts are carefully written, often by the author of the research and can be cited as a source, of course, it is not the same as reading the whole article.

- **Linked Full text** means that you may follow the link to articles that are full text in *Ebsco's* other databases (except when it doesn't work, as with the *Pediatrics* example above.) Ebsco does NOT link to full text articles available from other vendors, such as [Journals@Ovid](#), Proquest or Jstor, although full text articles from these databases are available to students at AASU.

- **Do not** limit your research to easily available full text articles online; you will be ignoring most of the recent, scholarly research.
